6. Piece of cloth - 1 pc.
7. Technical certificate - 1 pc.
8. Hanging net for storage and drying things (weight limit: no more than 5 kg) - 1 pc.

The frame of the tent consists of two equally large arcs, each consisting of 10 segments connected by elastic band to prevent the pipes from disintegrating. The material of pipes is D16t aluminium alloy with a diameter of 12 mm and a wall thickness of 1.5 mm. Adapters for connecting equal-sized carcass segments are made of D16t pipes with a diameter of 16 mm.

The awning of the tent is made of polyester Oxford fabric 240 PU 2000

The tent is provided with chimney cut, made of stainless steel and special fiberglass with silicone double sided coating.

Functional equipment

The entrance is equipped with zippers for easy and quick access to the tent. The tent includes pockets and a net for storing and drying things.

In one of the walls there is a window of transparent film.

The chimney cutting is made of stainless steel and special fiberglass with silicone double sided coating, designed for the stoves with a chimney diameter of 90 mm. For the stoves with a smaller chimney diameter, it is recommended to use an adapter ring. For air access to the stove there is a ventilation window, which is closed by a valve and a mosquito net.

Assembly procedure

The assembly of the tent should begin with the installation of the frame arcs into the pockets, which are located at the corners of the tent. After installing the frames in pockets, you need to close the zipper to hold the frame inside. After the assembly, you should cut the supplied guy rope into pieces and be sure to install all the wind guys! They are needed to keep the tent firmly in the wind, and also so that the stove does not touch the tent wall. Before installing the stove, be sure to open the valve closing the chimney section. The valve opens downward and is secured with a Velcro tape on the corner brace.

Precautionary measures :

- Secure the tent carefully on the ground to avoid tipping.
- Do not use a camp stove and other heating devices in a tent if a wind is more than 10 m / s
- It is not recommended to set up a tent close to the crowns of trees and other tents.
- Do not allow drunk and young children to use.
- Do not use gas or flammable substances to kindle a stove installed inside the tent.

Operating rules

The product can be used in temperature modes from -40C to +40C. The installation of all wind braces required. Be sure to observe all safety precautions when installing the stove. Do not install the stove close to the wall of the tent. Use stoves with a spark arrestor. Clean the chimney from soot during prolonged living and use. If there is a warm floor, it is not necessary in sauna mode.

Storage and transportation

The tent should be kept dry. It is recommended to dry the tent after each trip. Shake the sand and leaves out of the tent after each trip. Clean the tent of dirt with a soft cloth or sponge and soapy water. Do not use strong chemical cleaners. Never wash your tent in a washing machine or iron it. When breaks appear, try to glue or stitch them as quickly as possible. Always try to fold the awning by polyurethane coating inside. Arcs and pegs should be stored in special cases, otherwise they can damage the awning.
